

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

**The New List of Members.**

The next BULLETIN published by the Chapter will contain a list of all members in good standing. Those who have not yet paid their dues are earnestly requested to do so at once so that their names may be enrolled with the others. The Chapter is at last free from debt and much more can now be accomplished than ever before. It should be remembered that Active members six months in arrears for dues cannot vote, hold office, or receive the Chapter publications, and are liable to suspension.

**Information Wanted.**

The forty-second parallel of North Latitude seems to be the limit of the Black Snowbird's northern range in winter. In some parts of the country the birds breed south of this line, and it is not uncommon for others to winter north of it. It would be interesting to know what it is that determines whether the birds shall stay in a particular place or not, and information upon the subject is requested with the idea of getting a definite knowledge of these causes. One case is on record of the Snowbird's breeding in southern New York and in certain parts of northern Pennsylvania the birds are common in
